

Public lighting in Peñíscola

CASTELLÓN

Clece was awarded the public lighting and energy management service contract for Peñíscola (Castellón) for a period of 12 years and at a value of €6.4 million, which will involve more than three thousand lights and 35 municipal buildings. As a result of this management, a saving of 66.3 percent is expected, reducing CO₂ emissions by 280 tons a year.

As part of a temporary joint venture with Urbamed, the services provided, included the supply and energy management of public lighting and municipal buildings, including the operation, surveillance and monitoring, as well as replacing materials, lamps and other components as and when they deteriorate, and the maintenance and inspection of the installation, and the supply of all material. The contract also includes improvement works and renovation of all exterior lighting, to be replaced by LED technology.
