

## Bilbao Museum of Fine Arts Foundation

VIZCAYA

In 2013 the company won the contract to provide the maintenance, conservation with full guarantee, renovation, improvement and power supply management of the heating and electrical facilities of the Bilbao Fine Arts Museum Foundation. The critical factors were implementing an optimal lighting system for the works of art, managing and maintaining precise temperature and humidity levels to protect the pieces exhibited, and renovating the heating system.

Clece designed a solution for these challenges, and was able to work within the timetable set for the renovation and for implementing the museum's energy saving and management measures, and met the expected levels of energy efficiency.
